Claims 15-27 are presented for examination.

The amendments and remarks filed on June 6, 2006 have been received and entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 15-27 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 90/13292. Claims 1-14 are rejected under 35 U.S.C. 102 (b) as being anticipated by WO 90/13292. WO Patent teaches the use of Lipoxin A4 for the treatment of vasoconstriction which is found in diseases such as asthma, allergic reactions and inflammatory reaction in different parts of the body. See page 8, lines 16-31. Such use would inherently inhibit the activation of an inflammatory cell. The above reference also teaches the synthetic analogues lipoxin A4. See page 6, lines 14-17.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-28 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for treating certain disorders associated with columnar epithelial inflammation, does not reasonably provide enablement for treating all conditions associated with columnar epithelial inflammation. The specification does not enable any person skilled in the art to which it pertains, or with which it is most

Application/Control Number: 10/762,388 Page 3

Art Unit: 1618

nearly connected, to use the invention commensurate in scope with these claims. The factors to be considered whether a disclosure meets the enablement requirements of 35 U.S.C. 112, first paragraph, have been described in In re Wands, 8 USPQ2d 1400 (Fed. Cir.1988). Among these factors are:

1) The nature of the invention:

The claims are drawn to a method of treating columnar epithelial inflammation using a lipoxin A4 compound

2) The state of the prior art:

The prior art does not recognize that treatment of all inflammatory conditions of columnar epithelium are accomplished easily. The state of the art does not also recognize that one group of compounds are capable of treating all inflammatory disorders associated with columnar epithelium. According to Lance, Current Medical Diagnosis and Treatment, 43rd Edition the treatment of ulcer, Crohn's disease and bacterial entercolitis is done by different active ingredients.

3) The relative skill of those in the art:

The relative skill of those in the art is high.

4) The predictability or unpredictability of the art:

The unpredictability of pharmaceutical and chemical art is high.

5) The breath of the claims:

The claims are very broad and encompass a method of treating all conditions associated with columnar epithelium inflammation with lipoxin A4.

6) The amount of direction or guidance provided:

Application/Control Number: 10/762,388 Page 4

Art Unit: 1618

Applicant's specification provides guidance for and it is only enabled for the treatment of certain inflammatory disorders of epithelium of different parts of the body. Applicant's specification does not set forth a representative number of examples to demonstrate that lipoxin A4 is capable of treating a representative number of disorders associated with inflammation of columnar epithelium.

7) The presence or absence of working examples;

The examples in applicant's specification are not drawn to the treating an inflammatory condition using a lioxin A4 compound.

8) The quantity of experimentation necessary;

Since compound structure and activity for such pharmaceutical use must be determined from case to case by painstaking experimental study, one of ordinary skill in the art would be burdened with undue experimentation to determine all inflammatory disorders which can be treated by a lipoxin A4 compound.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Zohreh A. Fay whose telephone number is (571) 272-0573. The examiner can normally be reached on Monday to Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Hartley can be reached on (571) 272-0616. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
